PrefSuite Document

# Content

1. Purpose 3
2. Salesman 4
3. Creation of commissions table 6
4. Calculation of commissions on Sales Documents 8
5. Liquidation of commissions 10

# 1. Purpose

This document explains salesman implementation in PrefGest and how to add commissions for apply to each salesman in function of the discount applied over the PAF.

For this task it is necessary to have PrefGest knowledge and also we need to know how to create and manage sales documents and scripts executions with SQL.

This document goes to those people who are in charge adding employees on the data base and for those responsible establishing commissions to be charged for each salesman.

# 2. Salesman

We find Salesman application in PrefGest inside sales application.

Figure 1. Commercial application acces.

Once in, we will see a screen containing our entire salesman we created on our data base. As other's applications in PrefGest, we can apply filters, search, add new salesman, export data from this grid to an Excel document and select columns of data that appears on the tray.

To add a new salesman click over add icon, or at the toolbar Edition>Add. We will see a new screen in which case we could choose a code number if it wasn't apply to another salesman and then write the name of the new salesman.

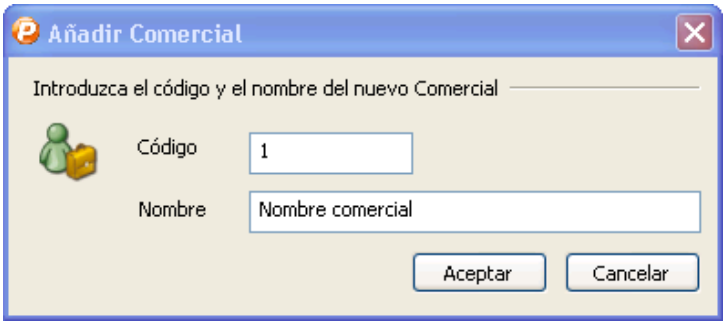

Figure 2. Creation of a new salesman.

After click on "accept" *Aceptar* will see the salesman grid recently created with general data about him.

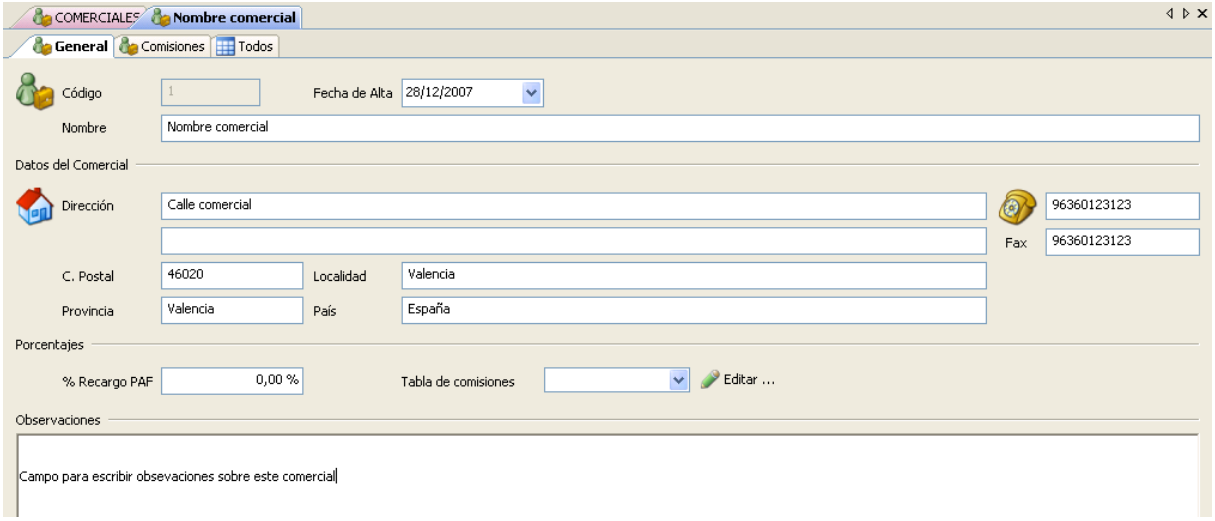

**Figure 3.** Sales man general data.

On this screen will fill the information we consider necessary as address, date, phone numbers, etc. Below these fields we have %chargePAF, here will fill %charge for Paf´s for those Paf´s sales documents created with this salesman. This percentage is an increase which will take place on the lines forming the budget, the percentage is going to be done automatically and is hidden from the customer.

Although we assigned X percentage for a particular salesman, we can change it creating a new document or once created. On the other hand, we have the commission table that we are going to apply on this salesman, (the creation of commission table will be explain at the next point). On this field we can choose a table from those who were created, once we have one selected, clicking on edit we are able to modify it or review it. At the bottom of the screen there is an observation field where we could write things about the salesman and we consider relevant.

Then we have the commissions field, here, it reflects the commission which has been trading in the budgets established and accepted for that salesman

The third and last field on this grid is "all" *Todos*. On this field will find a data resume of general field.

# 3. Creation of commissions table

To create a new commissions table or modify an exist one we have to go to commissions inside group "several" Varios on the applications menu.

Figure 4. Commissions application acces.

Once we are in, will see the grid showing all our commissions table created. To add a new commissions table, click on "add" icon *Añadir* , and an assistant menu will appear to create the new table.

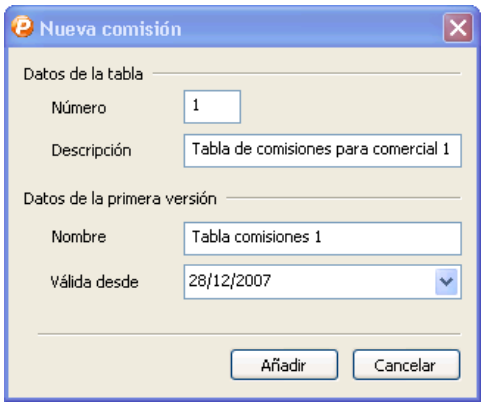

Figure 5. Commissions table Assistant

Clicking on add icon will see the table for fill.

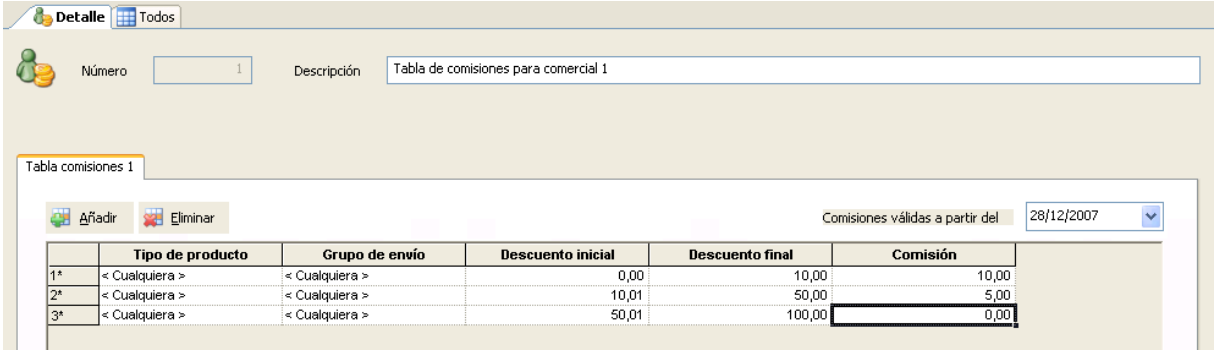

Figure 6. Commissions table.

On the field "valid commissions from date 28/12/2007" *Comisiones validas a partir del,* will choose the date from which they will take these commissions.

To add a new line, click "add" icon *Añadir*, if we want to delete some lines, just select the line and press "delete" *Eliminar*.

On the line just created, on "product type" *Tipo de producto* y and "Shipping Group" *Grupo de envío* will select from the drop menu the value we want to choose, we also could leave it as "whatever" <*Cualquiera*> if our commissions does not depend on the product type and shipping group. On the fields "Initial discount" *Descuento Inicial* and "Final Discount" *Descuento Final,* the range of discount will be applied to a salesman for a specific commission, this commission shall be put in the Commission field.

From commissions table we can create different versions, each one will have a different start validity date, and change without changing the table that we have created or have to change in the salesman information has associated the table. To create a new version on the toolbar click Versions> "Add version" añadir versión.

After creating a new version, if we want to remove, or change the name we have given, click on the toolbar versions> Remove version (or amended version, as we want to perform the action) will be removed (or modified) the version from commissions table that we have seen on screen.

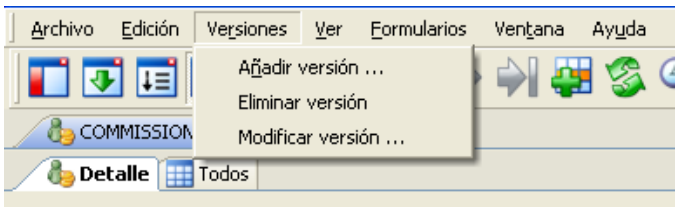

Figure 7. Posibles operaciones con versiones de tablas de comisiones.

# 4. Calculations of commissions on sales documents

To enable the calculation of commissions in a database we need to run the following script on it:

```
insert into VariablesGlobales("company"Empresa, "name"Nombre,"value"Valor)
values (1,N'CalculateGoalTariff',N'1')
```

```
insert into VariablesGlobales("company"Empresa, "name"Nombre,"value"Valor)
values (1,N'SubTotalAsPercentage',N'1')
```

This second script is to make the calculation of commissions, sub-type numbers are allocated proportionally on the lines of the document, like a percentage.

Once this is done we will see an example as the commissions are calculated on a document. The steps to create sales documents and all actions that can be done about them can be found in documents WP2006.3.005 - Add documents of sale and WP2006.3.006 - Workflow Document sale.

Usually commissions are paid once we have paid our invoice, for this reason that's why the commissions are calculated to be paid the check mark as shown in the picture

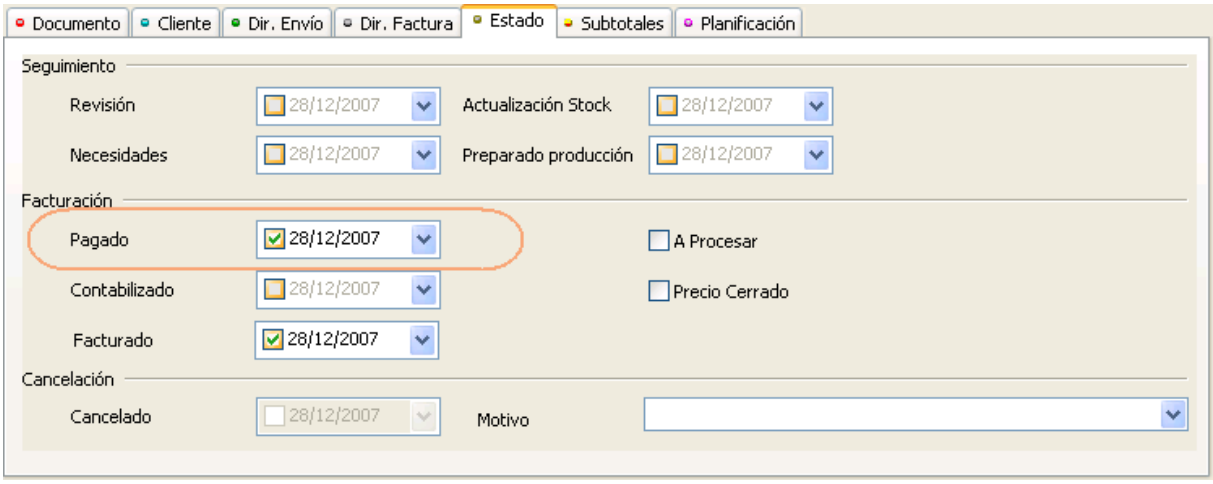

Figure 8. State of a sales document

.

Commissions can be calculated using the commissions table or we can do it manually. To calculate the commissions click on the toolbar Document> "salesman commission" Commission Commercial ... the next screen appears:

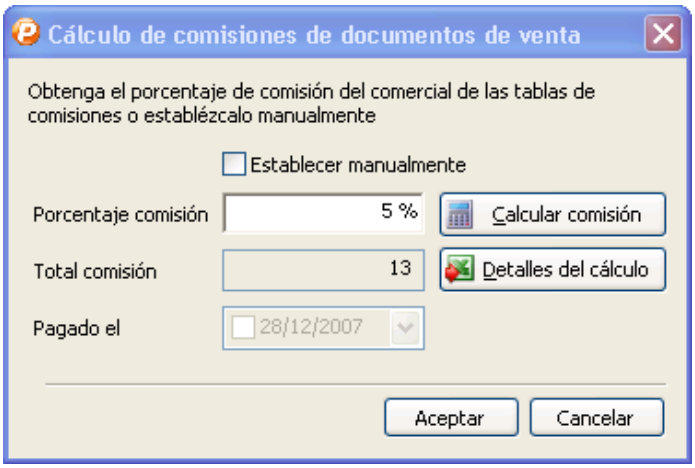

Figure 9. Calculation of commission.

By default, appears commission that has associated this salesman on the table, if we want to change the percentage of commission set manually check and write the new rate of commission.

In order to calculate the commission, press on the Calculate button press commission. We can see the details of the commission created by clicking on details of the calculation, creating an Excel file.

# 5. Liquidations of commissions

Once we have calculated the commissions, can proceed to pay the commissions that we have pending, we need to have the check "paid" mark on the invoice. To settle the commissions will go to the salesman application and on the toolbar, select commissions> Liquidate commissions, a new screen will appears, and it is here where we have to choose among the range of dates that should be the invoices we want to liquidate their commissions.

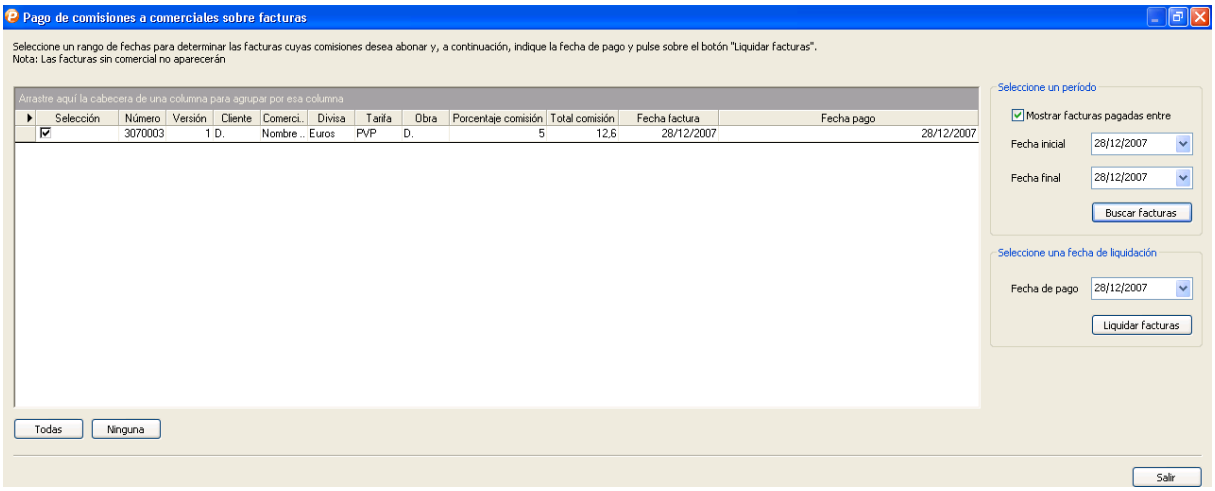

Figure 10. Liquidations of commissions.

In the central grid will see all invoices with paid date beetwen those dates created .

We choose those that want to settle fees and click on Liquidate invoices, will see the following message

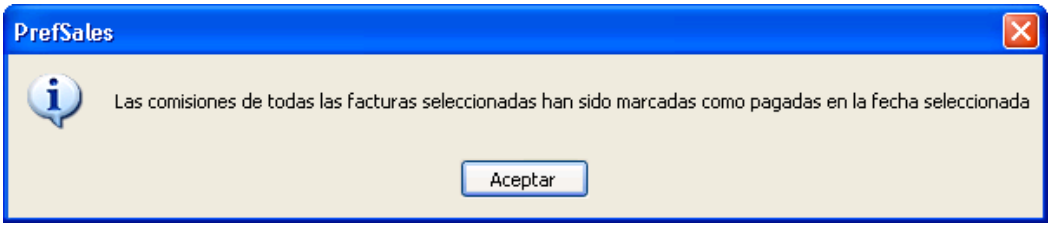

Figura 11. Informational message about liquidation invoice.

Invoices that we have selected will disappear from the central grid. We still have those invoices outstanding in the selected dates.

What we are going to see now is the field Commissions in the salesman applications.

Comerciales | Nombre comercial
General | Comisiones | Todos

**Comisiones**

| Número | Versión | SubTotal | Tarifa Objetivo | % Comisión | Total Comisión | Fecha Pago Comisión |
|---|---|---|---|---|---|---|
| 1.070.270 | 1 | 252 | 291 | 0 | 0 | |
| 1.070.270 | 2 | 252 | 291 | 5 | 13 | |
| 3.070.003 | 1 | 252 | 0 | 5 | 13 | 28/12/2007 |

Figura 12. Commissions in the salesman field.

These three lines concerning to a budget, your order and your invoice. The first line is the budget, which is not yet implemented the commission, in the second line, corresponding to the order indicated in the Commission% the percentage of commission given to the salesman, in this case a 5 % and in the Commission indicate the total number of units in the currency that we use in our database, in this case 13 €. The third line for the invoice, this indicates the date on which commissions are paid within the Payment Date field Commission.

We can export to an Excel doc this information using the button with the icon.
